CRYPTO

Myths vs Reality

Introduction

Cryptocurrency is one of the most talked-about topics in the world today. Some say it’s the future of money. Others think it’s a scam. With so many opinions out there, it’s easy to feel confused.

If you feel the same—you’re not alone.

Most people hear about Bitcoin, crypto trading, or blockchain from social media, friends, or news stories. But very few get clear, simple information from reliable sources. That’s why myths and fears spread faster than facts.

This eBook is here to change that.

Myth 1

Crypto is a Scam

Not all crypto is fake.
Like any industry, there are a few scams—
but many crypto projects are real and useful.

Big names like Bitcoin, Ethereum, and Solana are legit.
These have real-world uses, strong technology, and
are trusted worldwide.

Real crypto projects solve real problems.
For example, Bitcoin helps store value digitally, Ethereum supports smart contracts and Solana enables fast online payments.

It's just like the stock market.
There are good and bad companies. Smart investors research before investing—and you should do the same with crypto.

Crypto is a new and powerful technology.
Crypto is a powerful technology.
Don't let a few scams blind you—learn before you judge.

Myth 2

Crypto Trading is Illegal in India

Crypto is Not Illegal
The Indian government has never banned crypto. You're allowed to buy, sell, and trade cryptocurrencies.

Not Legal Tender
Crypto is not considered "money" like rupees—you can't use it to buy groceries. But you can hold and trade it as a digital asset, like gold or stocks.

Indian Exchanges Are Legal
Platforms like WazirX, CoinDCX, and CoinSwitch follow government rules, do KYC, and work under strict regulations.

Government Has Set Tax Rules
You have to pay 30% tax on profits and 1% TDS on each transaction—this means the government allows crypto and has made rules for it, not banned it.

Just Follow the Rules
Use trusted apps like Delta Exchange, keep a record of your profits, and pay taxes on time. If you follow the rules, there's nothing to worry about.

Myth 3

You Need Big Capital to Start

Invest with Any Amount

- Unlike buying stocks, where you often need to buy a full share, crypto-currencies can be divided into tiny pieces.
- Ex - you don't have to buy 1 whole Bitcoin—you can buy as little as 0.0001 BTC. This makes crypto accessible for everyone, even if you don't have a large sum of money.

Simple and Convenient Payment Methods

- Many crypto platforms in India accept easy payment options like UPI, making it simple and fast to add money.
- They also allow very low minimum purchases, so you don't have to worry about big upfront investments.

Small & Regular Investments Can Grow Over Time

- Just like SIPs in mutual funds, investing small amounts in crypto regularly helps you take advantage of compounding & your returns earn returns.
- Over time, these small investments can grow significantly, helping you build wealth gradually and steadily.

Myth 4

You Need Big Capital to Start

Crypto is not the only thing that goes up and down

Stocks, gold, and real estate also rise and fall in value. Crypto seems riskier mainly because it's new and less familiar. But price ups and downs are a normal part of any investment.

You can protect yourself

You can reduce risk in crypto by using smart strategies. For example, set a stop-loss to limit losses, invest in different coins to spread risk, and decide your goal before investing. These steps help you stay calm and in control.

Risk comes from not knowing

Crypto feels risky when you don't understand it. But when you learn how it works, it becomes easier and safer to invest. Knowledge is your best protection.

Learn with others

Being part of a learning group or community helps a lot. You can ask questions, learn from others, and stay updated. This keeps you from making emotional decisions.

Myth 5

You Need Big Capital to Start

Early Adoption

We are still in the early days of crypto, just like how the internet was in the late 1990s. Most people haven't started using it yet, which means there's still plenty of room for growth.

Big Companies are Getting Involved

Famous companies like BlackRock, JPMorgan, and Tesla are starting to treat crypto as a serious, long-term investment. Their involvement shows that crypto is becoming more trusted and accepted.

New and Growing Trends

Exciting new areas like Decentralized Finance (DeFi), Non-Fungible Tokens (NFTs), and Web3 are just beginning to grow. These innovations are creating fresh opportunities for people to explore and benefit from.

Why It's Not Too Late

History teaches us that those who learn and get involved early usually gain the most when a new technology becomes popular. It's not too late to start now. The only risk is if you don't learn about it and stay out of the market.

Conclusion

Crypto is more than a trend—it's changing how we think about money, ownership, and trust.

Keep Learning

Crypto is growing fast. The more you learn, the more confident and prepared you become to navigate this space.

Make Smart Choices

Base your decisions on facts, not fear or hype. Informed investors are successful investors.

Break the Myths

Don't let common myths stop you. Understanding the truth helps you see real opportunities.

Join the Community

Start your journey with others who are learning too. A strong community like CTM community which gives you support, clarity, and motivation.
